A Synopsis of the Financial Market EnvironmentAugust 2022

Quarter In Review

Summary of Investment Returns

Quarterly Synopsis

- World equity markets were sharply negative, with worries over inflation, slowing growth, and the Ukraine conflict weighing on stocks.
- U.S. equities declined. Two Federal Reserve rate hikes, persistent inflation, and worries over Ukraine helped lead stocks lower.
- International equities also fell, as inflation rose and energy supply concerns grew with the Russia/Ukraine conflict.
- Emerging market equity declined with US dollar strength and continuing inflation concerns.
- U.S. fixed income was negative. Two interest rate hikes and the Fed's indications for further rate hikes hurt Treasuries.
- Non-U.S. fixed income fell. The European Central Bank hiked rates for the first time in 11 years and said it would end asset purchases in the second half of 2022.
- Hedge funds posted a more minor decline. Macro strategies performed best in the quarter.
- Commodities declined as well, with industrial and precious metals both tumbling.

Quarter In Review: U.S. Economy

GDP Growth

- U.S. GDP growth fell -0.9% in the quarter ending June 30, the second quarter in a row of negative growth.
- Typically two consecutive quarters of negative growth means the economy is in a recession, but the Fed has said that the ongoing strength of the labor market means that it is still too soon to call it one.
- Consumer spending declined as higher inflation persisted, and business investment fell slightly.
- The economy is facing growing challenges, including rising interest rates, persistent inflation, and supply disruptions stemming from the pandemic and the Russia/Ukraine conflict.

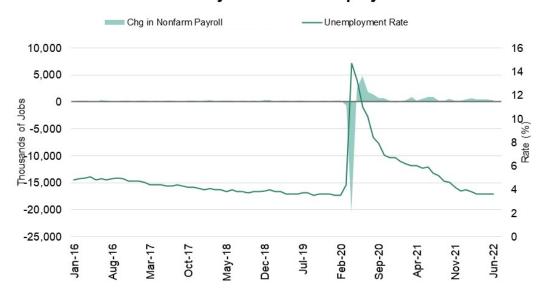

U.S. Real GDP Growth

Employment Picture

- The unemployment rate was 3.6% in June, holding steady at that level for the fourth month in a row.
- Nonfarm payrolls rose by 372,000 in June, a strong number that muddles the recession narrative and complicates the Fed's interest rate decision making at a time when growth is slowing.
- The education and health services sector gained the most in June (96k), while professional and business services added 74k.

Quarter In Review: U.S. Economy

Consumer Confidence and Spending

- The consumer confidence index slid in the quarter as Americans continued to become more pessimistic about the state of the economy.
- Inflation, the Russia/Ukraine conflict, and negative stock and bond markets weighed on consumer sentiment.
- Confidence also waned among business leaders, who said the cost of goods and labor meant that they were paying far more to keep their companies running.
- Personal consumption expenditures fell in May*.

Consumer Confidence and Spending

Retail Sales

- Retail sales rose +1% in June 2022 and +8.4% year over year.
- Sales data are not adjusted for inflation, so much of the higher retail sales figures are a reflection of price increases. For instance, spending at gas stations rose 3.6% in June, which was largely a result of higher gas prices.
- When adjusted for inflation, sales were slightly lower.

Quarter In Review: Global Economy

World GDP Growth

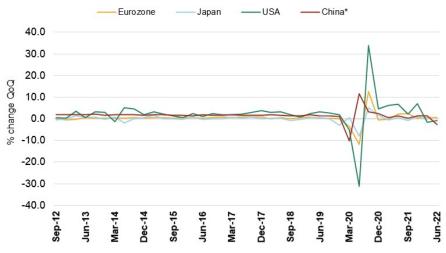

- Eurozone GDP rose +0.7% quarter over quarter (QoQ). The economy grew despite growing consumer pessimism with high inflation, rising interest rates and the ongoing Russia/Ukraine conflict.
- China's GDP grew at a rate of +0.4% in the quarter ending June 30. Growth missed expectations as the economy was slow to emerge after COVID-related lockdowns.
- Japan's GDP fell -0.1% in the quarter ending March 31**.
 Business investment turned negative in the quarter and public investment fell more than anticipated.
- U.S. GDP declined -0.9% in the quarter ending June 30.

Global Employment Picture

- Eurozone unemployment was +6.6% in May 2022**, beating market forecasts. The unemployment rate has been declining since early 2021 as more of Europe has reopened after the height of the pandemic.
- Germany (+2.8%) and the Netherlands (+3.3%) were two major European economies with some of the lowest unemployment rates in the Eurozone.
- Japan's unemployment rate ticked up to +2.6% in May.**

Performance

- Emerging markets fell -11.5% during the quarter as strength in the US dollar and falling commodity prices later in the quarter provided headwinds. Emerging markets outperformed both developed international and US markets, largely due to China's positive performance.
- China (+3.4%) was the only emerging market notching a positive return during the quarter ending June 30 as Covid-19 lockdown measures were relaxed and the economy began to reopen.
- Commodity-linked markets in Latin America fell significantly during the second quarter as the Latin America index fell -22%, driven by a drop in industrial metals and agriculture prices.
- Consumer discretionary (+6.3%) was the only positive sector in the quarter as stock prices in large Chinese companies such as Alibaba and Meituan recovered following easing of lock down and Covid restrictions. The falling price of metals hurt materials (-20.6%) while continued inflation and global supply chain issues hampered technology stock performance (-20.8%).

The sum of income and appreciation returns may not equal total return due to rounding and/or the compounding of individual component returns to each other.

Investment Strategy: Dune is currently in the market with their fourth opportunistic fund, DREF IV, which is targeting a capital raise of \$1.25 billion and net returns in the 15-17% range, which will

be generated from a combination of capital appreciation and current yield. The Fund will focus on acquiring assets that are illiquid for a number of reasons including a distressed or challenging capital structure, mismanagement, ownership disputes or negative investor sentiment. Dune has identified three investment themes for Fund IV: (1) Distressed - acquisition, recapitalization and/or restructuring of sub performing and non-performing commercial mortgages and other real estate loans, (2) Deep value-add - repositioning of real estate assets and/or rationalization of capital structures, and (3) Contrarian - investing to take advantage of oversold markets or asset classes where the acquisition basis is compelling and where there may be mispricing. For each of these three strategies the Fund may invest in debt or equity through partnerships, joint ventures or other structures. Dune expects to make 15-25 investments in total for the fund with a target holding period is 5 years. The Fund will be diversified across property sectors including multifamily, for-sale residential, retail, office, industrial and hotel. There are no specific allocations to any sector. The fund will be diversified across regions in the US; however, there are no regional targets or limits.

Statistics Definition

Statistics	Definition					
Return	Compounded rate of return for the period.					
Standard Deviation	A statistical measure of the range of a portfolio's performance, the variability of a return around its average return over a specified time period.					
Sharpe Ratio	Represents the excess rate of return over the risk free return divided by the standard deviation of the excess return. The result is the absolute rate of return per unit of risk. The higher the value, the better the product's historical risk-adjusted performance.					
Alpha -	A measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. It is a measure of the portfolio's historical performance not explained by movements of the market, or a portfolio's non-systematic return.					
Beta -	A measure of the sensitivity of a portfolio to the movements in the market. It is a measure of a portfolio's non-diversifiable or systematic risk.					
R-Squared -	The percentage of a portfolio's performance explained by the behavior of the appropriate benchmark. High R-Square means a higher correlation of the portfolio's performance to the appropriate benchmark.					
Tracking Error	A measure of the standard deviation of a portfolio's performance relative to the performance of an appropriate market benchmark.					
Information Ratio	Measured by dividing the active rate of return by the tracking error. The higher the Information Ratio, the more value-added contribution by the manager.					
Active Return	Arithmetic difference between the managers return and the benchmark return over a specified time period.					
Up Market Capture	The ratio of average portfolio return over the benchmark during periods of positive benchmark return. Higher values indicate better product performance.					
Down Market Capture	The ratio of average portfolio return over the benchmark during periods of negative benchmark return. Lower values indicate better product performance
